

- 4 Let's change the transparency of the image. **Edit** the code in step 2 and make it's like the one below.

```
$("#image_button").click(function() {  
    $("img").animate({height: 300, width:300, opacity:0.4},"slow");  
});
```

- 5 **Save** your code and **refresh** your browser. **Click** the "resize image" button to see the changes.

Tip: Changing the second parameter in the animate() function from "slow" to "fast" will make it animate faster.

- 6 You can also change the image by changing the image path using the **attr()** function. **Edit** the code in step 4 so that it's the same as the one below.

```
$("#image_button").click(function() {  
    $("img").animate({height: 300, width:300, opacity:0.4},"slow");  
    $("img").attr("src","images/tito.png");  
});
```
